(57) **ABSTRACT**

A system and method that enables a calling party to verify delivery and/or cancel stored facsimiles. This advance is achieved by a voice mail system that receives incoming telephone calls and compares an incoming caller ID with caller ID's stored in conjunction with previous faxes. If a caller ID of the incoming call matches a caller ID in the database, (i.e., the calling party has previously left a fax) then the calling party is presented with a menu of options. The menu may include determining whether the called party has accessed the voice mail system but did not print or delete the fax message, and if the fax has not already been deleted, the calling party may delete the fax.
